App homepage:
This is a simple app homepage that was created in the weekly workshops. It meets the criteria of the required components from the task sheet, such as having a drop-down menu for different units.

\
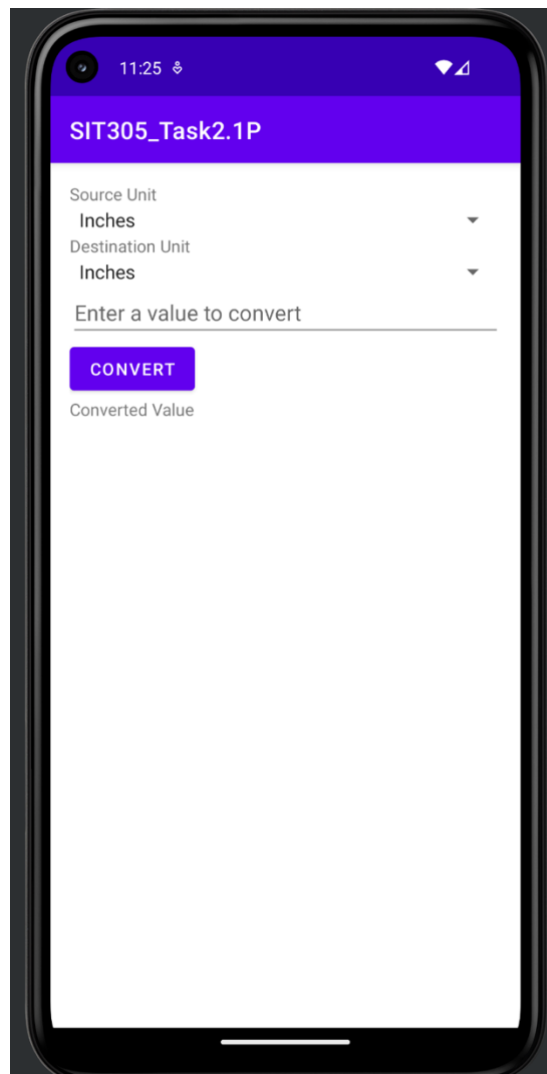

App drop-down menu:

I have created a drop-down menu for a user to select different length, weight, and temperature units that they wish to convert to.

Converted Units:

After selecting both a source unit and a destination unit, a user can input a number into the text box. After pressing the convert button, the app will convert the input into the desired unit, which is shown to the user at the bottom of the app.
